

# **Investigating the Impact of the COVID-19 Pandemic on the American Stock Market**

Andres Portes, Ella Ndalla, Ridhwaan Ali

## Our Objective

**Objective:** to understand the pandemic's impact on the US stocks performance through the New York Stock Exchange, and advantageously use the lessons learned to better anticipate future stock market performance and leverage economies of scale in case another pandemic is ever declared.

## Research & Focus

Our research explored stock performance on the NYSE by sectors based on the The Global Industry Classification Standard.

Our research period spanned from March 2019 to March 2023. This time frame provided coverage of stock performance prior to the pandemic, during the pandemic and the recovery period. The dataset highlighted the impact the pandemic had on the stock market and provided indication on whether or not the US stock market was currently performing under its pre-pandemic conditions.

# Initial Analysis and Key Findings

As many of us know, the pandemic ended up having a significant impact on the world economy, leading to unprecedented volatility and uncertainty that lingers to this day. It is undeniable that a few key trends and developments emerged as a result.

We initially took a look at the S&P 500 index, which is widely regarded as a benchmark for the overall performance of the stock market, to get an initial idea of the landscape. It fell more than 34% between its peak in February 2020 and its low point in March 2020.

Some industries, such as healthcare, technology and e-commerce, thrived during the pandemic as consumer behavior was altered and more people most likely turned to online pharmacies, home-based operations and online shopping over traditional stores. As a result, the stock prices of the companies in these sectors soared.

On the other hand, the industries that were hit hard by lockdowns and other pandemic-related restrictions, such as travel, hospitality and retail, saw their prices suffer. Many companies in these sectors were forced to lay off a vast number of their workforce, while others went bankrupt, which most likely lead to the decline in stock prices.

## COVID-19 Crash & Recovery

Created a dataset NYSE traded stocks covering a period of 2019 to 2023 using a 2 pronged approach:

1. Obtained a list of NYSE traded stocks with other attributes such as sector , industry ect.
2. Leveraged Yahoo finance API to fetch historical NYSE Stock data.

# Using API and Python to Retrieve Accurate Data and Sources

In [1]:

```
#!/pip install yahoo_fin
!pip install --upgrade yahoo_fin
```

In [17]:

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
from yahoo_fin.stock_info import get_data
```

In [13]:

```
## Import NYSE stock from CSV
NYSE_stock_df = pd.read_csv('/Users/ellandalla/Desktop/BootCamp/NYSE_Download.csv')
```

# Analysis - Sector Price over Time

## Analysis - Stock Volume over Time

We reduced the data frame to able to plot the data.

The CSV contained all the data from 2019-2023 so we made separate variable data for each year.

We chose to make the index the x axis and the volume the y axis.

## Visualization of Analysis

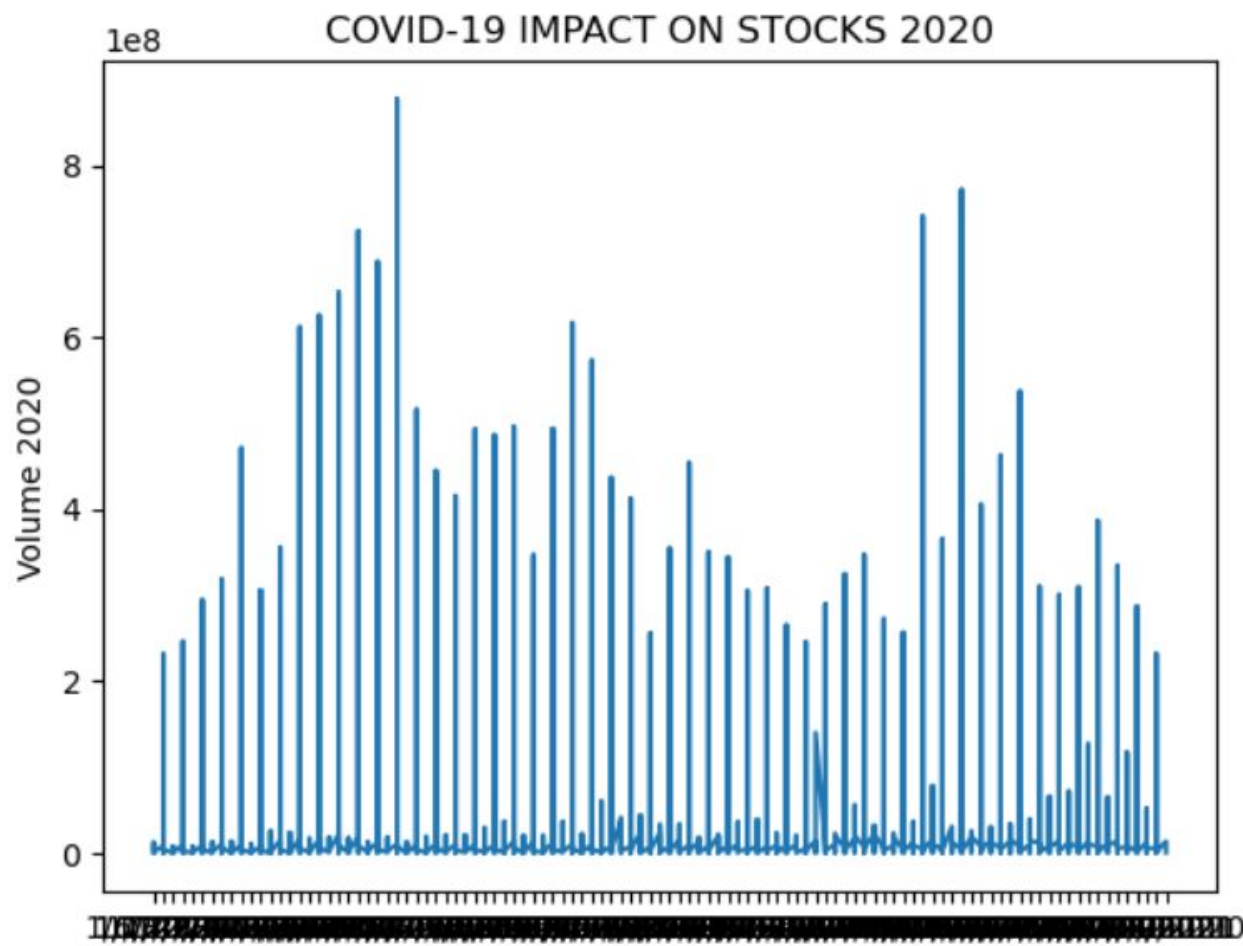

After declaring our x and y variables for plotting we were able to create line plots that show trends in the volumes for each separate year.

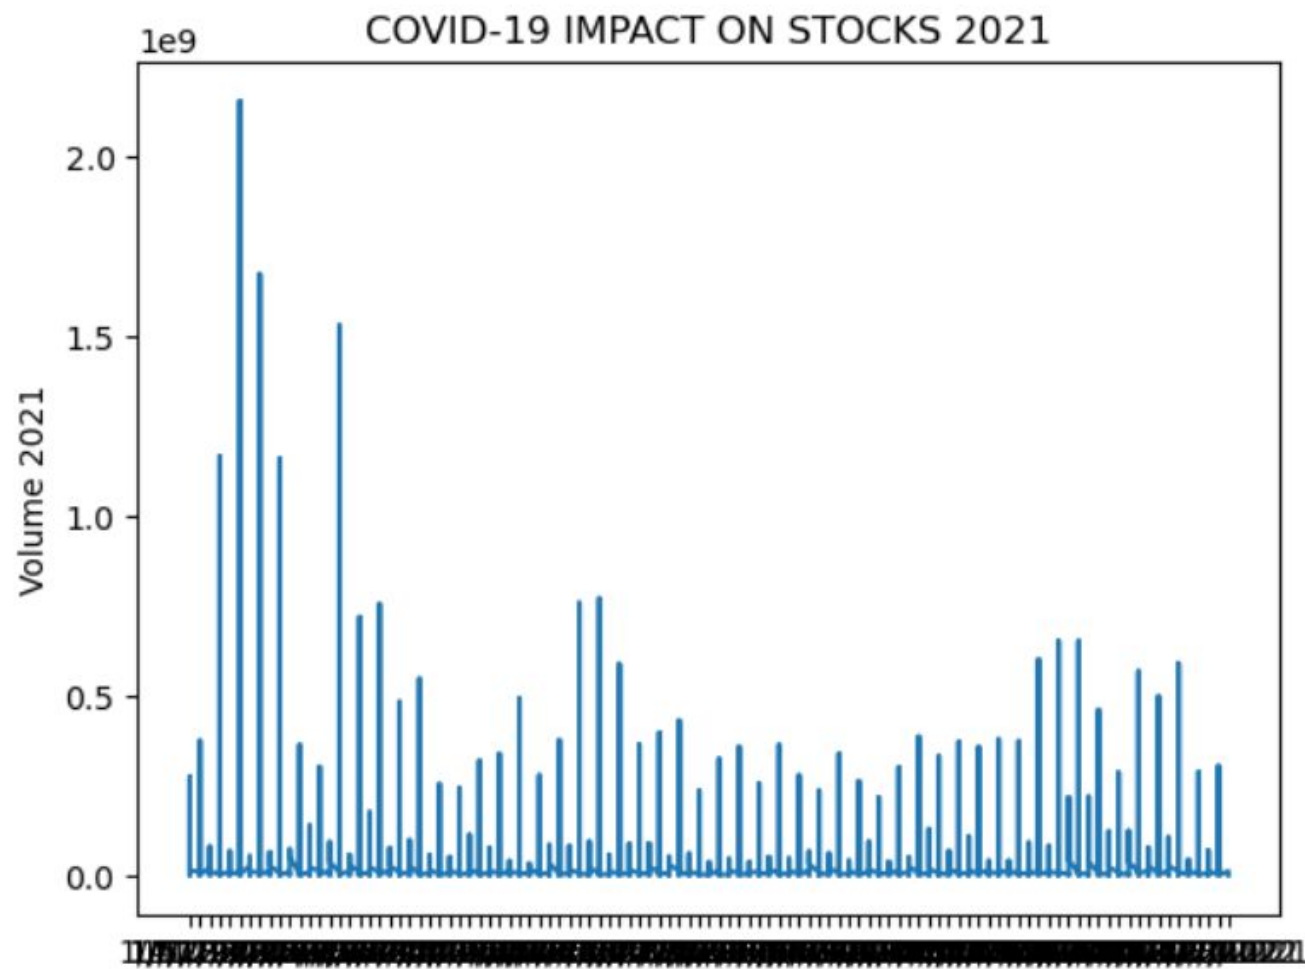

We also made another set graph that was grouped by sector and graphed it by year and price

COVID-19 IMPACT ON STOCKS 2019

## COVID-19 IMPACT ON STOCKS 2022

## Results + Recommendations

During unprecedented times like the COVID-19 pandemic, it becomes important for business leaders to focus on maintaining a strong financial position. Businesses now have no choice but to learn how to implement cost-saving measures, diversify revenue streams and invest in new technologies. During the pandemic, It became evident that building a strong, resilient and adaptive culture helps face the challenges and uncertainty of the stock market today, as well as the future.

Overall, it is undeniable that the Covid-19 pandemic had a significant impact on the stock market. It led to unprecedented volatility and changes in the way that stocks were traded around the world. The past few years were certainly a wake-up call for anyone or company who was conditioned to the success strategy of buying in the dip and selling when resources are overvalued. As the world continues to grapple with the impact of the pandemic and its economic impact, it is likely that we will witness the stock market continue to be affected in a variety of ways. The only way to combat this, is to be proactive, not reactive. The companies and sectors that used technology and resources to create a culture that did not solely rely on providing one single service, or services that limited themselves to one way of making contact with the consumer.
